

Cap Back Fixture

CAP BACK FIXTURE

The **Cap Back Fixture** was specifically designed for backs of caps and other very small items that do not need backing material. The smaller rounded front allows you to pull a garment like a cap back further over the lower hoop ring. By eliminating the magnetic backing holder, the size and cost has been reduced.

If you're a high volume cap back embroiderer, you can't afford to pass this device up. You'll be saving time and taking jobs that were impossible to do before.

\$250⁰⁰

Smaller size works best for getting in real tight spots
